

## Description

La Motilla del Azuer (Daimiel, Spain) is a Bronze Age fortified enclosure built of stone and defended by an outer wall and several intermediate walls. Dating between 2200 and 1500 BC, these walls protect the oldest and most well documented motilla in the Iberian Peninsula. Additionally this site exhibits an impressive funnel-shaped well that is more than 20 meters deep allowing it to reach the aquifer.

Some of the data for this project were originally collected as a joint effort between researchers at the University of Castilla-La Mancha (UCLM), the Fondazione Bruno Kessler (FBK) and CVASt at the University of South Florida (USF) under the legal permission of Junta de Comunidades de Castilla-La Mancha (Expte. 16.0834-P1. Sistema de documentación 3D del Patrimonio Cultural de Castilla-La Mancha). Data were provided by UCLM and FBK and are now being re-analyzed and re-processed by Global Digital Heritage (GDH).

## Specifications

**Country:** Spain

**Region:** Castilla-La Mancha

**Site:** Motilla del Azuer

**Age:** Prehistoric

**Provenance:** Daimiel

**Digitization method:** Photogrammetry
