

## Description

The archaeological ensemble of Melque is one of the most important historical sites of the High Middle Ages in Spain. It is located in the municipality of San Martín de Montalbán, just 30 kilometers from the city of Toledo. It consists of a very well preserved church, a monastery, several dams and a fence or wall. However, there is no consensus among experts about the date of its foundation. Some authors date it in the seventh century, in Visigothic times, while others consider that it was founded in the eighth century by Mozarabs, that is to say by Christians but under Muslim domination. In total, 5 dams have been preserved that constitute one of the most important medieval hydraulic complexes in Spain. The dams that we can see in the 3D model correspond to dams number I and II, both located on the Stream de las Zorras.

We want to thank Dr. Marisa Barahona Oviedo and her team for their help.

## Specifications

**Country:** Spain

**Region:** Castilla-La Mancha

**Site:** Santa María de Melque Dams

**Internal ID:** Dam 2

**Digitization date:** 18/09/2018

**Photos / scans number:** 1609

**Hardware:** DJI Phantom 4 Pro

**Lighting:** Natural

**Model URL:** <https://gdh.org/model/medieval-dams-i-ii-of-melque-spain/>
