

Description

Description: The medieval church of San Vicente (Sigüenza, Spain) was built in the Middle Ages (12th century), after the Christian conquest of this territory. This is a beautiful example of the Romanesque style. The main entrance is through a richly decorated portal crowned by an image of the Virgin Mary. Inside the church there is a magnificent polychrome crucified Christ dating from the 12th-13th centuries.

Methodology: 3D model created in Reality Capture using 132 Leica RTC360 scan positions and 6581 drone and terrestrial-based images. Additional processing completed in Geomagic wrap.

Acknowledgment: We want to thank the collaboration of the Bishopric of Sigüenza-Guadalajara, especially D. Juan Antonio Marco Martínez, D. Jesús de las Heras Muela and D. Miguel Ángel Ortega Canales, for the facilities they have given us and for the interest they have shown in the project.
