

Description

Bird Bone Awl, broken, or bird bone tube, XCB-105-3715. 400 BCE-100 CE

XCB-105 Adamagan (Aleut for place of walrus hunters) is at the head of Morzhovoi Bay, western Alaska Peninsula. It is a massive village with multiple occupations. When it was occupied 400 BCE-100 CE, it was the largest village in the Arctic with an estimated 1000 people. It also has limited occupations dated 2200-1700 BCE, 1000-600 BCE, and 900-1100 CE.

The Western Alaska Peninsula artifacts are presented as a result of the research conducted under grants NSF 9630072, NSF 9814086, NSF 9996372, NSF 9996415, NSF 1139266, NSF 1321411. H. Maschner, Principal Investigator. These artifacts were scanned with either a Faro Edge Arm or a Minolta Vivid 9i. Processed in Geomagic or Polyworks. 2-8 photos were used for texture in Geomagic Wrap. Original digitizing work done at the IVL at Id. St. Univ. Subsequent processing and publication completed at Global Digital Heritage.

Specifications

Country: United States of America
Region: Alaska
Site: Adamagan
Material: Bone
Age: Antiquity
Provenance: Adamagan
Digitization method: Laser Scanner
Photos / scans number: 2/8
Model URL: https://gdh.org/model/bird-bone-awl-xcb-105-3715/
