

Description

Detailed 3D digital model of the T20 tomb of the al Khudaira archaeological site (Sharjah, UAE), once its archaeological excavation was completed. The excavation was carried out in February 2020 by the Spanish archaeological mission of the Universidad Autónoma de Madrid. The remains of a circular funeral building with 1.25-metre-thick masonry walls and an oval-shaped burial chamber 1.45 metres in diameter were uncovered. Only scattered fragments of human bones were found inside, which seems to indicate that the tomb was looted in the distant past. Project ID Al Khudaira 06 Terrestrial.
